Summary

Backend engineer building production AI systems for corporate finance in Java/Spring Boot and Python on AWS EKS, grounded in microservices, distributed systems and cloud-native architecture, which I also teach at ITBA. I care about making LLM agents safe to run on top of real money.

Experience

Mendel

Buenos Aires, Argentina

SEMI-SENIOR BACKEND ENGINEER – AI PLATFORM — *Jul. 2026 – Present*

JUNIOR BACKEND ENGINEER – AI PLATFORM — *Jan. 2026 – Jul. 2026*

- Grew Mendel's MCP server from **15 to 69 tools**, taking it from read-only queries to operating the product. Listed in **Anthropic's Claude connector directory** and used by **250+ users at 60+ companies** in Q3.
- Shipped **22 new tools in under two weeks** so enterprise customers could report expenses end to end and book travel from Claude, and integrated Mendel into **a large enterprise customer's internal AI agent**.
- Designed a **multi-tenant OAuth gateway** that gives every region a single login (tenant resolved from email, PKCE and DCR brokering), and added **MFA, Microsoft SSO and delegated token minting for AI agents**.
- Made LLM-initiated writes safe for financial data with **idempotency keys and Redis locks**, per-customer **feature-flag gating of tools**, and a tool surface free of personal and card data.
- Own the WhatsApp expense assistant (**Spring Boot** and a **Python LangGraph agent**): in Q3, completed expense reports grew **+166% QoQ**, and **88% of processed receipts** end in a completed report.
- Put deterministic guardrails around the LLM (state checks, hallucination guards on write claims, confirmation before irreversible changes) and built an **evaluation rig** that replays conversations turn by turn.

Instituto Tecnológico de Buenos Aires (ITBA)

Buenos Aires, Argentina

UNIVERSITY PROFESSOR — *Mar. 2025 – Present*

- Teach a class of **40+ students** in microservice design, with Docker, Kubernetes and CI/CD workshops.

Accenture Argentina

Buenos Aires, Argentina

AI LLM TECHNOLOGY ARCHITECTURE ASSOCIATE — *Aug. 2025 – Jan. 2026*

- Built a multi-agent AI platform on a custom n8n fork, routing across **8+ specialized agents** and improving query resolution accuracy by **25%**.
- Designed agent workflows and integrated RAG pipelines, contributing to a **30% reduction** in irrelevant responses through user feedback, sentiment analysis and performance-based retraining.

DATA & AI DEVELOPER INTERN — *Aug. 2024 – Aug. 2025*

- Optimized LLM-powered enterprise chatbots, cutting **cost per request by 15%** and **latency by 20%**.

Education

Instituto Tecnológico de Buenos Aires (ITBA)

Buenos Aires, Argentina

MASTER OF ENGINEERING, SOFTWARE ARCHITECTURE & ENGINEERING (HONORS) — *Mar. 2023 – Jul. 2025*

BACHELOR OF ENGINEERING, COMPUTER ENGINEERING — *Mar. 2020 – Dec. 2023*

Skills

AI / LLM	MCP, LangGraph, Agent and tool design, LLM guardrails and evals, RAG
Back-end	Spring Boot 3 & 4, FastAPI, REST, OAuth 2.0 / OIDC (PKCE, DCR, SSO, MFA), MySQL, Redis, MongoDB
Cloud	AWS (EKS, CloudFront, WAF), Docker, Kubernetes, Terraform, CI/CD
Programming	Java, Python, Go, SQL, TypeScript, JavaScript, C
Languages	Spanish (Native), English (C2 – Proficiency), French (B1)
